WAVE CURTAINS

LET'S GET

MEASURING!

MEASURING FOR WAVE CURTAINS

How do you want the curtain to sit against your window?

OUTSIDE RECESS (We call this EXACT MEASUREMENT): If you want your Curtains to cover the whole window recess or if your windows are flush with the wall (so no recessed space), then this is the option for you.

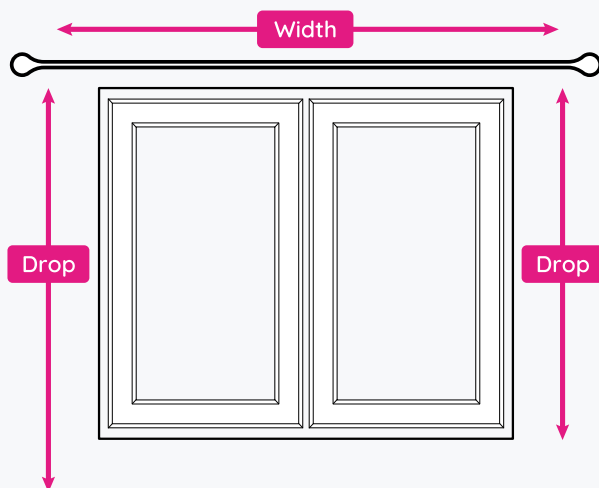

INSIDE RECESS (We call this RECESS MEASUREMENT): If you want your wave curtain track to mount inside the window recess, this is the option for you.

If replacing an existing curtain, measure the width of your pole/track and from the top of the pole/track to the bottom of your curtain. Select exact size when ordering.

NOTE: Wave curtains use a track to open and close, which we include for free with every order.

Using a metal tape measure, follow our handy measuring guide to ensure you order exactly the right size for your windows. If you have any other questions about measuring or are interested in ordering a single curtain, please call us on **01484 443790**.

OUTSIDE RECESS (EXACT)

For measuring the width, measure for the finished track width you require, as we will not take any deductions here.

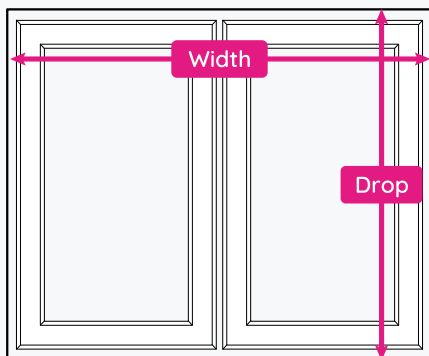

For the drop, simply measure from where the top of the track will be, to where you want the bottom of the curtain to finish.

If you're going to fit outside a recess, and you're measuring a window size, we suggest adding an additional 15cm overlap on each side of the width.

For the drop we would recommend extending the drop 15cm past the window. This will reduce excess light bleed when the curtain is hung.

NOTE: Your entered size will be the finished size your order will arrive at, please ensure you make any deductions yourself if you're selecting this size.

INSIDE RECESS (RECESS)

Measure across the width of the top of your window recess and repeat this for the drop. Make no deductions here, as we will automatically reduce the size by 10mm from the width, and 15mm from the drop to ensure a great fit.

If the bottom part of your recess is tiled (which is common in bathrooms and kitchens), measure the width from the tiled section, as it is usually the narrowest.

If you'd rather make your own deductions, order your curtains as 'Exact' fitting and the track will arrive at the exact width you request. If you're unsure, give our customer services team a call on 01484 443790.

NOTE: You will need a minimum of a 7.5cm clearance for window handles.
